Point of Sale

Wireless Strategy

Welcome to the SmartBar range of wireless metering products. We applied the petrol pump control system to drink, where product dispensed is clocked up automatically, live, and compared to sales. All information is sent **Wirelessly** to the back office. Discrepancies are reported by product, time, bar, and waiter.

Draught

The smartbar draught flowmeters will count each pint dispensed and compare with sales to highlight discrepancies which will be detected as they occur without having to wait for periodic stocktakes and historical information.

Freepour

The smartbar pourspout is the smallest and most powerful wireless liquor dispenser on the market. It provides quick and precise dispensing of programmable pour sizes. All dispense information is sent WIRELESSLY back to the office for comparison with sales information where any variance is reported.

Optic

We monitor shots dispensed from optics simply by replacing the support behind the spirit bottle with a smartbar support which houses an RFID chip. All shots are recorded and the information sent WIRELESSLY to the back office for comparison with sales.

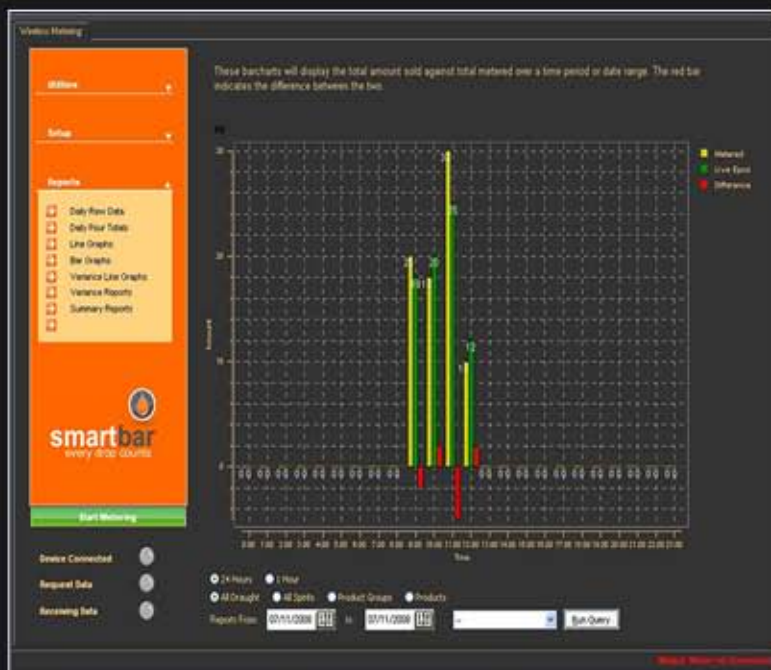

All our wireless metering products are simple to install and do not interfere with existing work practice. They control stocks and minimize the need for expensive stocktakes.

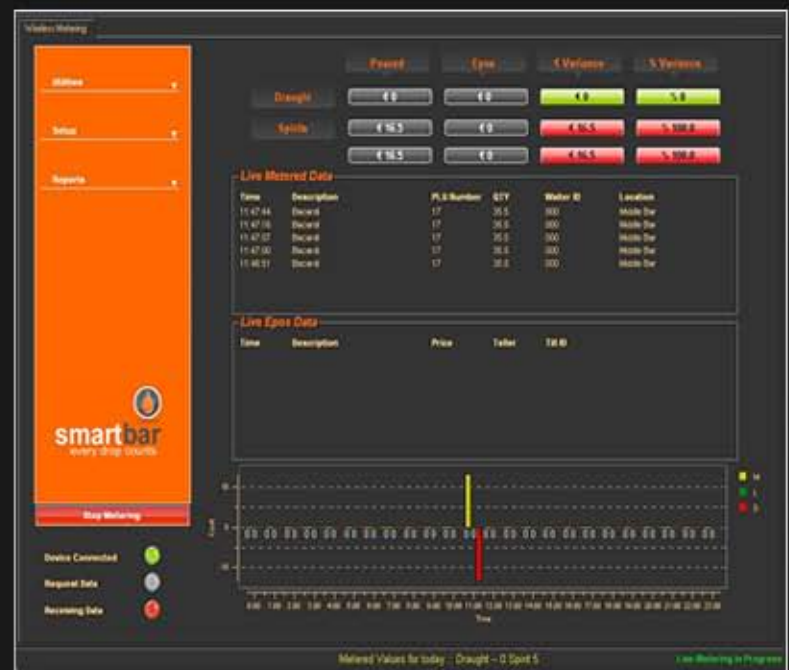

Metering Software

The Smartbar Metering Software has been developed to provide statistical analysis of your stock levels across all wireless metering devices. When a shot is poured or a pint pulled, it will be automatically registered with the software. The software will evaluate all stock levels and provide accurate charts outlining any discrepancies which can be pin pointed to a specific bar in your establishment.

Dispense vs Sales

Variance Reports

Features

- Wireless products
- Neat and attractive
- System is easy to install
- Quick dispensing
- Live reporting
- Low Introduction Costs

Benefits

- Problems detected immediately
- Increases profits
- Reduces shrinkage
- Low installation costs
- Integrity maximised
- Control back in house

Introduction

Smartbar has changed the face of stock control in the hospitality industry from the traditional stocktaker to a more dynamic system which is geared towards solving problems. The core product is a stocktaking kit containing a range of measuring devices as depicted below which will greatly improve the stocktaking function.

Scanner

The Smartbar barcode scanner allows stockcounts to be carried out quickly and simply, with inbuilt warnings and checks to minimise the risk of error. Stocktakes can be downloaded to your PC in seconds.

Keg Gauge

The Smartbar Keg Gauge measures the contents of any keg by gauging pressure and converting it to volume. The Unit is tapped on the keg and gives a digital readout of the volume.

Spirit Scale

Open free standing spirits are weighted. The Scanner is linked to the scales and takes weight automatically. The method is accurate to 1/35th of a shot.

Spirit Level

The Spirit Level has been designed by Smartbar to measure spirits on optic. The level is calculated for all brands and sizes. The Spirit Level is accurate to 1/10th of a shot.

How it Works?

We will install smartbar software on the premises which will allow processing of documentation and collection of sales in house, reducing stocktaking to a simple counting function.

Operation

Periodic stocktakes are carried out internally or independently using the smartbar stocktaking kit and are downloaded to the PC software. Reports are produced which will highlight any product discrepancies during the stocktaking period. Problematic items can be monitored using the smartbar wireless metering products (shown below) to eliminate discrepancies.

Draught

Freepour

Optics

The Cost

Smartbar will give the best value and most control for your stocktaking expenditure.

There is a low entry level for the basic stocktaking kit including full training. If you prefer to have counts carried out independently our nationwide team of professional stock counters who are equipped with our stocktaking devices will cost €30.00 per hour. Since documentation is processed in house costs are greatly reduced ie. 3 hour stocktake will cost €90.00.

Features

- Completely accurate counts
- Speed in stocktaking
- Extremely simple to use
- Live control of stocks
- No guesswork involved

Benefits

- Stocktaking costs can be cut by 50% +
- Confidential information remains in house.
- The need to count stock is minimised
- More control
- Integrity maximised

EPOS

Our Epos is a powerful and flexible suite of software applications available for your bar, restaurant or hotel. Complete with Bar, Restaurant and Back Office applications our software helps its clients to deliver high levels of customer service whilst maximizing profitability.

Total Epos Solution

Our Epos is broken down into a series of software packages. Each of these packages can be easily applied and tailored to suite the software requirements of your business. From Back Office, Finance, Epos Bar & Restaurant System to Online Real Time Booking integrated with your Epos terminal.

Main POS Screen

- Stylish, modern and easy to use graphical interface
- Easily set up and control user tabs & bills
- Customize your own menu content
- Split billing

Login/ Info Screen

- Track, View & Print last Sales
- Easily change from user with named buttons
- Color co-ordinated name-to-sale display

Online Restaurant Booking

Food & Beverage Managers, Restaurant Managers and Chefs will all benefit from being able to plan workloads and table availability better. Our EPOS delivers accurate and live reservation details straight to your EPOS system, via your website!

Key Features

- Bar/Restaurant/Shop Epos.
- Restaurant Management Software inc.
- Touchscreen, Printer & Cash Drawer inc.
- Back Office software inc.
- Full Stock Control.
- Loyalty Card System.
- Tabs Enabled.
- Online Restaurant Booking.
- Online Integration.
- 3 year Epos warranty.
- Small footprint.

- Calm & Elegant
- PC Box Easily Removed
- Duo Hinge

User Friendly

Our Epos is very user friendly and managers are provided with a thorough training system that includes one-to-one training and a complete User Manual is provided with each system
